

TPP v.1.4.4.2 updated

02.10.2024

If paid support expired before 02.10.2024, this TPP version will not work for a user. It is necessary to either pay for support or download previous version distributive, the release date of which is earlier than the expiration date of paid support.

Get the distribution: [TOPODRONE Software Distributor](#)

- + **Fixed:** AQUAMAPPER GNSS time has a day transition or batch post-processing of datasets taken over several weeks.
- + **Fixed:** SPP single vector/SPP network equalization/PPP: Updated links for downloading ephemeris from the server (University of California, San Diego [UCSD]), because NASA server does not have ephemeris for every day.
- + **Fixed:** LCG: During calculation of angles can make a large number of passes. Limit the number of passes = 10.
- + **Added:** "Clear logs" button in all modules.
- + **Added:** PRJ: Moved to the Server. Now they can be loaded the same way as Geoids.
- + **Fixed:** PPK/RTK configuration files.

Revision #22
